

Add “host” entry in Windows-7 (client machine)

Firstly login with “Administrator” account into the windows client machine and do the following steps:

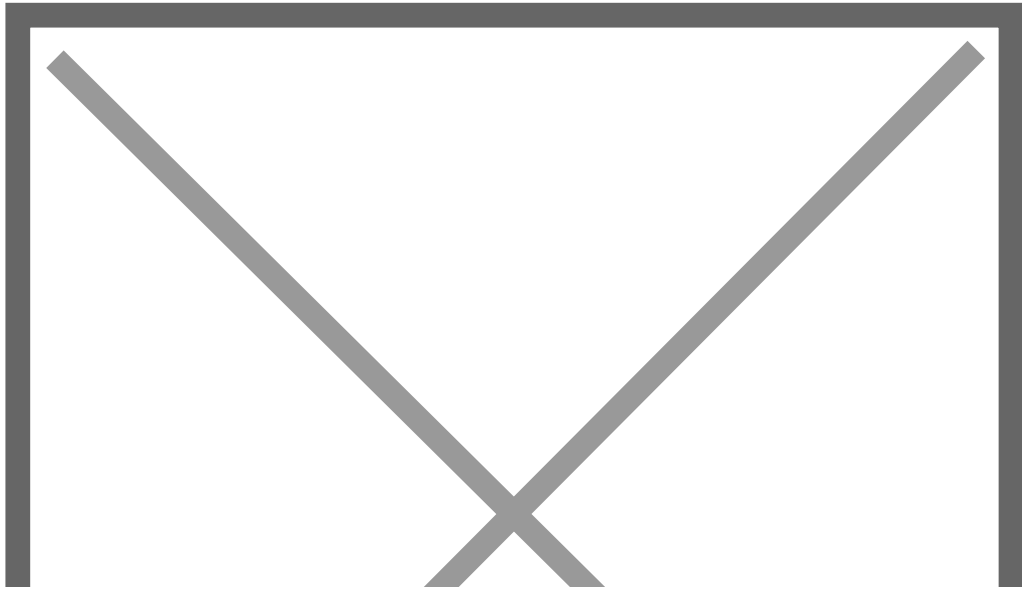

1.

Go to windows the main menu, and click on “ Computer ”

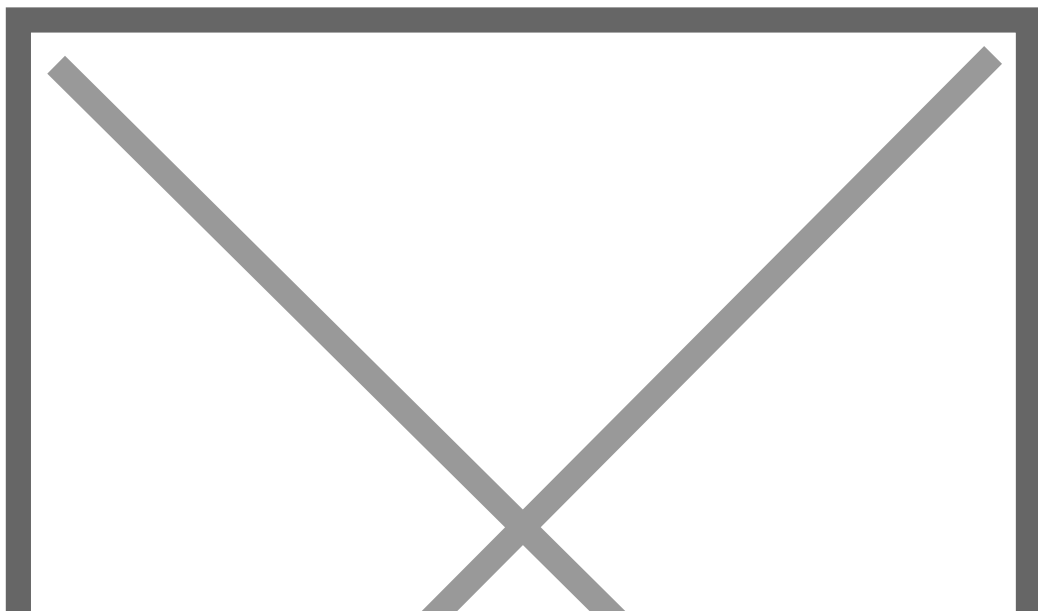

2.

Folder explorer will open, click on “ Local Disk (C:) ” and go up to the path “ Local Disk (C:) \ Windows \ System32 \ drivers \ etc \ ”.

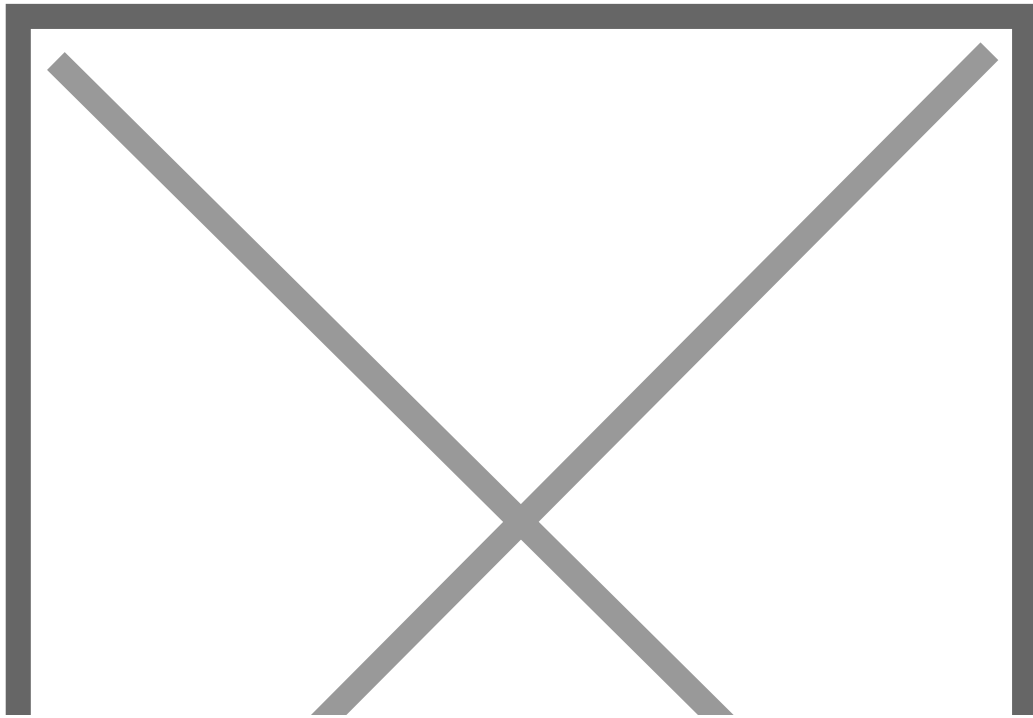

3.

Right-click on "host " file to edit it and add the host entry

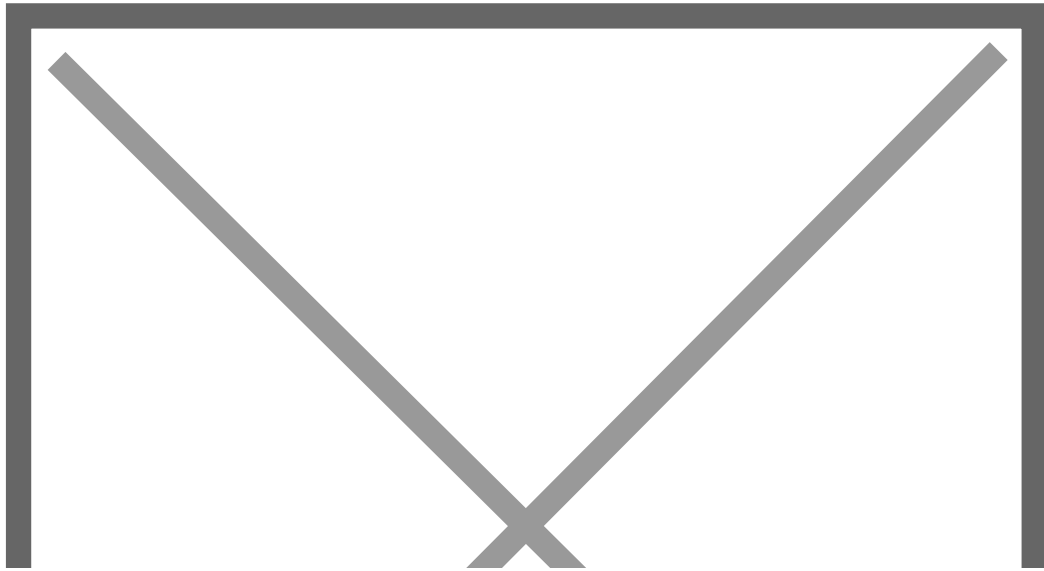

4.

Select the notepad program to edit the host file.

5.

Add the host entry as " server_ip clixserver " in the host file and save it and then close the file.

After saving and closing the “host” file, you should be able to access the “https://clixserver” website from the browser.
