

# N-computing setup related

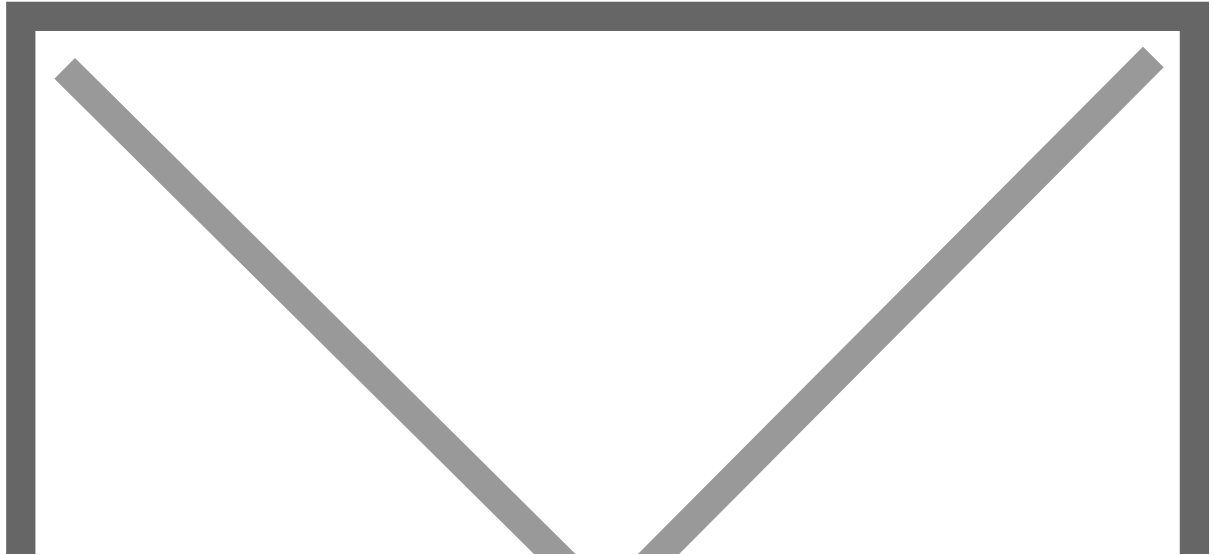

- 

**NComputing ports information:**

- 

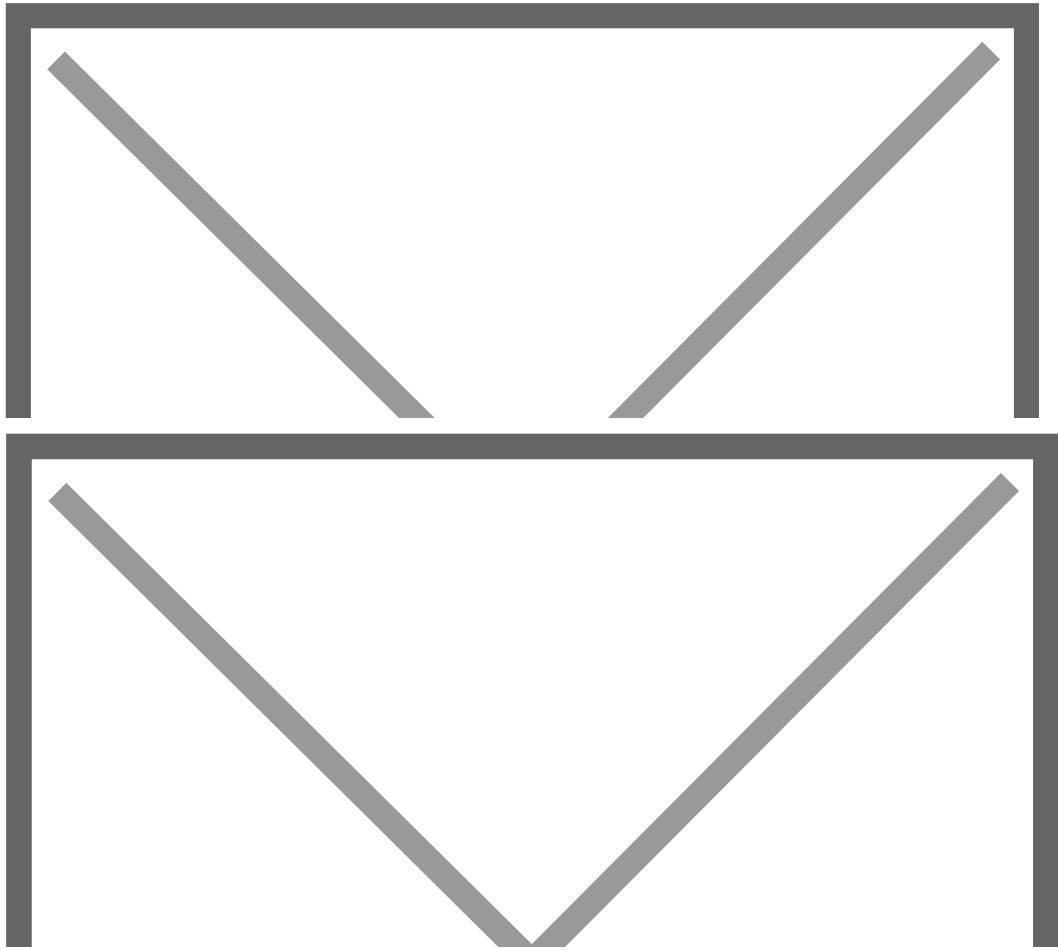

**How to Assign a Static IP Address in M300 N-computing Device**

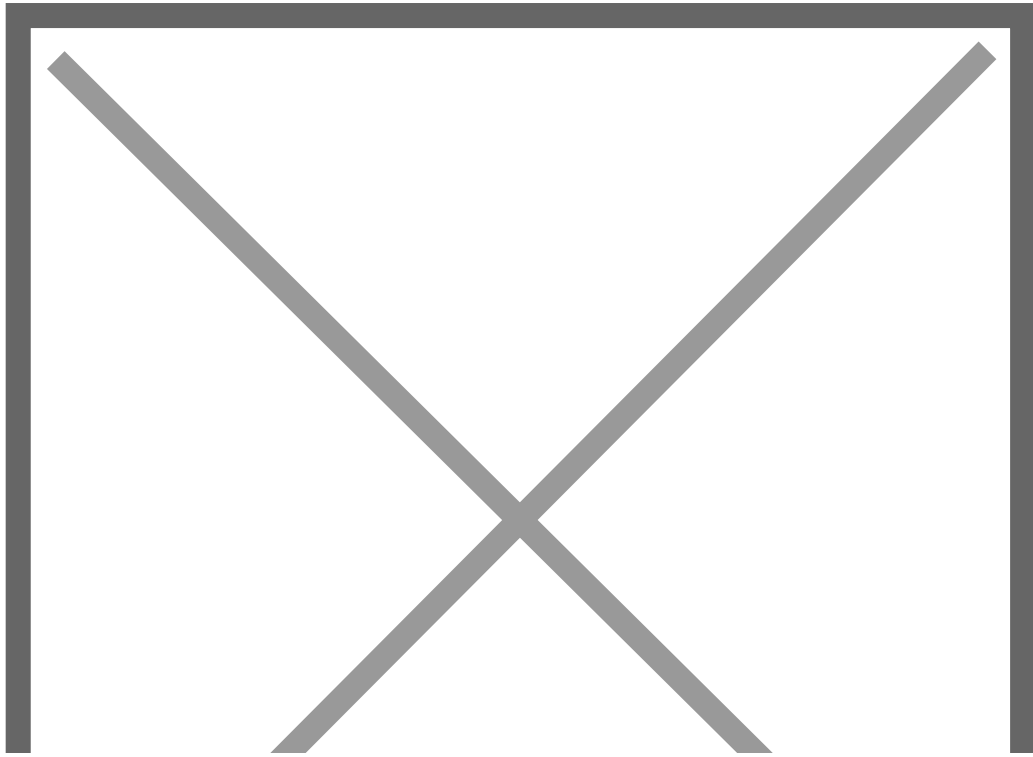

After installing the vSpace server at the host PC or Server, it is important to set up The n-Computing device, after connecting the device, please turn on the device (M300 have 3 devices please configuration on the main device which size is bigger than 2 devices)

- 

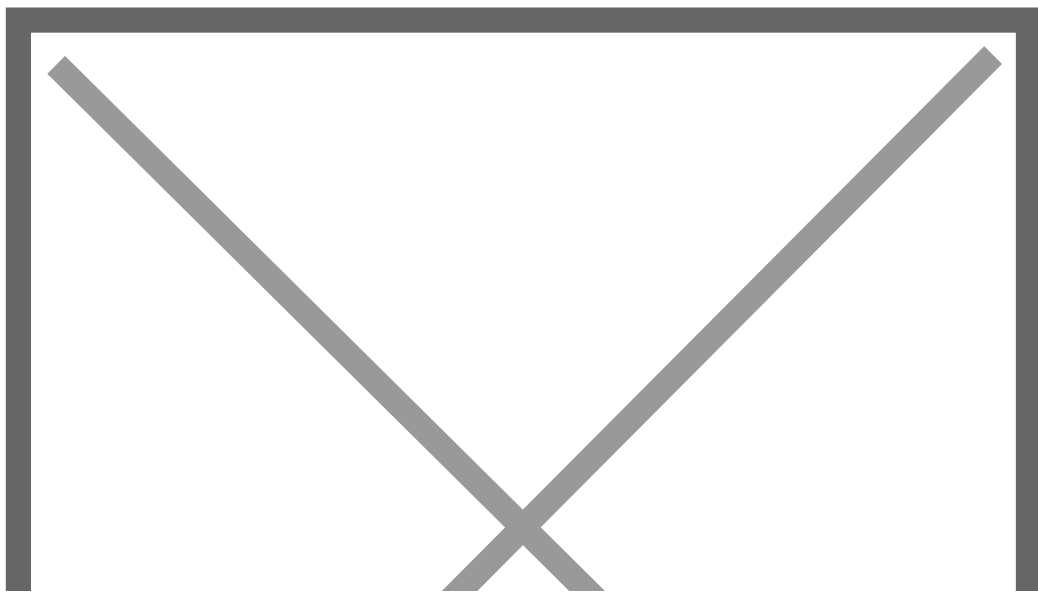

At first power on the N-computing server and N-computing device then press **F5**.

- Select the " Device setup" option.

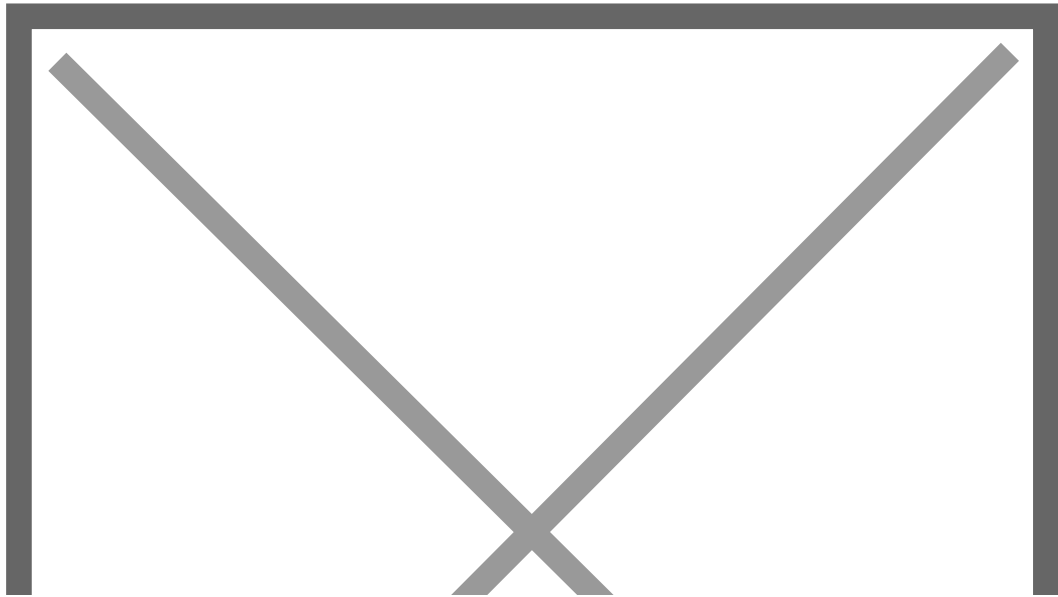

- Then select the " Network Setting" option.

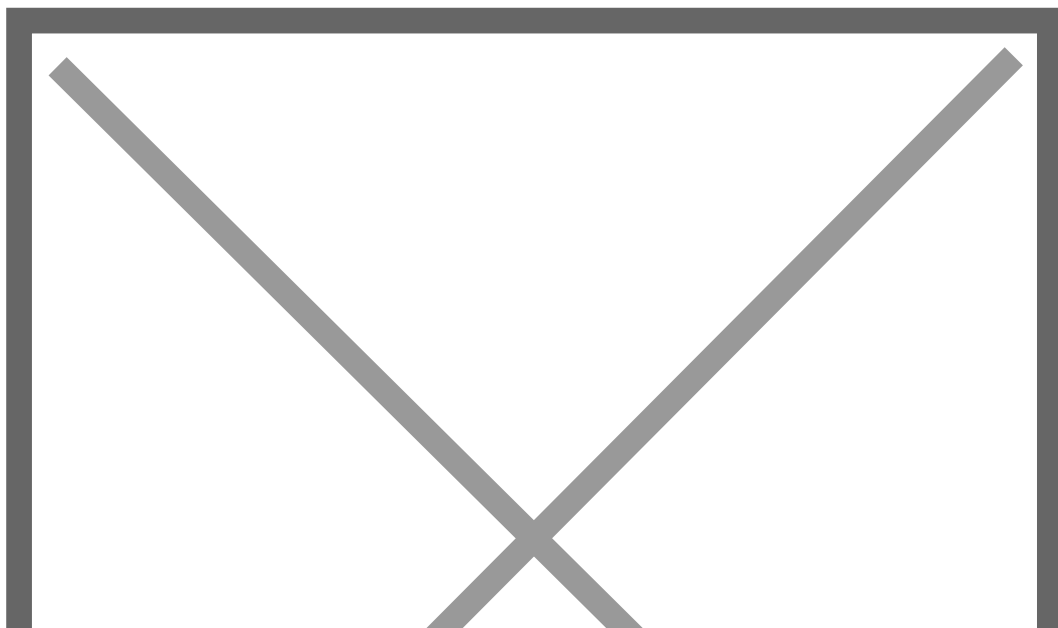

- Select " Static Radio button " and insert IP (Internet protocol), Subnet mask and Gateway.

Ex. - The IP address 192.168.1.4, subnet mask 255.255.255.0, Gateway 192.168.1.14.

- After filling all the blocks of IP click on the Apply button.
- And finally, click on the save button to save all the changes.

- Now Server will show up on the home screen of the M300 N-computing setup.

- **N-computing issues and solutions:**
  - **Issue: Cannot connect to Host**
